Predicting clinical outcome for a patient diagnosed with cancer comprises determining the expression level of one or more genes, and compared to the amount found in a reference cancer tissue set.

Disclosure; SEQ ID NO 291; 198pp; English

The invention relates to a method of predicting clinical outcome for a CC patient diagnosed with cancer by determining the expression level of one CC or more genes, or their expression products, selected from p53BP2, CC cathepsin B, cathepsin L, Ki67/MiB1, and thymidine kinase in a cancer CC tissue obtained from the patient, normalized against control gene(s), and CC compared to the amount found in a reference cancer tissue set. The CC specification also discloses an array comprising polynuclectides CC hybridizing to the following genes: FOXMI, PRAME, Bc12, STK15, CEGP1, Ki-CF, GSTM1, CA9, PR, BBC3, NME1, SURV, GATA3, TFRC, YB-1, DPYD, GSTM3, CC 67, GSTM1, CA9, PR, BBC3, NME1, SURV, GATA3, TFRC, YB-1, DPYD, GSTM3, CC 67, GSTM1, CA9, PR, BBC3, NME1, SURV, GATA3, TFRC, YB-1, DPYD, GSTM3, CC 67, GSTM1, LD1, BstR1, p27, CCNB1, XIAP, CKB2, CDC25B, IGFIR, CC AK055699, PI3KC2A, TGFB3, BAGI1, CYP3A4, EpcAM, VEGFC, pS2, hENT1, WISP1, CC HNF3A, NFKB965, BRCA2, EGFR, TK1, VDR, Contig51037, pEMT1, EPHXI, IFIA, CC LHF3A, NFKB965, BRCA2, EGFR, TK1, VDR, Contig51037, pEMT1, EPHXI, IFIA, CC HNF3A, NFKB965, BRCA2, EGFR, TK1, VDR, Contig51037, pEMT1, EPHXI, IFIA, CC LHF3A, NFKB965, BRCA2, EGFR, TK1, VDR, Contig51037, pEMT1, EPHXI, IFIA, CC HNF3A, NFKB965, BRCA2, EGFR, TK1, VDR, Contig51037, pEMT1, EPHXI, IFIA, CC LHF3A, NFKB965, BRCA2, EGFR, TK1, VDR, Contig51037, pEMT1, EPHXI, IFIA, CC HNF3A, NFKB965, BRCA2, EGFR, TK1, VDR, Contig51037, pEMT1, EPHXI, IFIA, CC LHF3A, NFKB965, BRCA2, EGFR, TK1, VDR, Contig51037, pEMT1, EPHXI, IFIA, CC HNF3A, NFKB965, BRCA2, EGFR, TK1, VDR, Contig51037, pEMT1, EPHXI, IFIA, CC LHF3A, NFKB965, BRCA2, EGFR, TK1, VDR, CONTIG51037, pEMT1, EPHXI, IFIA, CC HNF3A, NFKB965, BRCA2, EGFR, TK1, VDR, CONTIG51037, pEMT1, EPHXI, IFIA, CC HNF3A, NFKB965, BRCA2, EGFR, TK1, VDR, CONTIG51037, pEMT1, EPHXI, IFIA, CC HNF3A, NFKB965, BRCA2, EGFR, TK1, VDR, CONTIG51037, pEMT1, EPHXI, IFIA, CC HNF3A, NFKB965, BRCA2, EGFR, TK1, VDR, CONTIG51037, pEMT1, EPHXI, IFIA, CC HNF3A, NFKB965, BRCA2, EGFR, TK1, VDR, CONTIG51037, pE

Also described: (1) determining the presence or absence of a pathological cell in a patient; (2) an expression vector CC comprising a nucleic acid molecule described above; (3) a host cell comprising the vector; (4) an isolated polypeptide, which is encoded by CC the nucleic acid; (5) an antibody that specifically binds the polypeptide of (4); (6) specifically targeting a compound to a pathological cell in a CC patient by administering to the patient the antibody above; and (7) a CC drug screening assay. The nucleic acid is useful as diagnostic markers or CC diagnosing a pathology, e.g. cancer (e.g. cancer of the bone marrow, CC bladder, brain, breast, cervix, colon/rectum, kidney, lung, ovary, CC pancreas, prostate, skin and uterus), wounds, ischaemia, heart diseases, atherosclerosis and endometriosis. The nucleic acid is also useful in CC drug screening, particularly for identifying agents for treating these
                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   닭
  The present sequence encodes a human CA9 polypeptide. It is used in method of the invention. The specification describes a method modulal angiogenesis associated with wound healing, retinopathy, ischemia, inflammation, microvasculopathy, bone healing, skin inflammation or follicular development. The method comprises providing to a subject HOGS, HOGIS, CA9, HXB, IGFBP5, HPARP, STC1, mig-6 or SER4. The method antisense polymucleotides, polypeptides and antibodies are useful fo
                                                                                                                    Claim 1;
                                                                                                                                              Inhibiting anglogenesis for treating wound healing, retinopathy, ischemia, inflammation, microvasculopathy, bone healing, skin inflammation or follicular development by providing to a subject antisense polynucleotide.
                                                                                                                                                                                                                                                                                                                      26-JUL-2001; 2001US-0307600P.

                                                                                                                                  ð
                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                     S
                                                                                                                                                                                                                                                                                                                        The invention relates to nucleic acids and proteins (ADN38683-ADN40064)
CC whose expression is upregulated or downregulated in specific cancers or
CC other diseases such as anglogenic or fibrotic disorders, and to methods
CC of determining the presence or absence of a pathological cell in a
CC patient by detecting a nucleic acid at least 80% identical to those of
CC the invention or by detecting a polypeptide of the invention. The
CC invention also relates to expression vectors and host cells comprising a
CC nucleic acid of the invention; antibodies which specifically bind a
CC polypeptide of the invention; use of such antibodies for drug targeting;
CC and methods of screening for modulators of activity or expression of the
CC polypeptides and mucleic acids. The nucleic acids, polypeptides,
CC antibodies and methods are useful for diagnosing, prognosing and treating
CC cancer and other conditions such as psoriasis, ischaemia, heart disease,
CC atherosclerosis, inflammatory diseases, autoimmune diseases, retinal
CC neovascularistation syndromes, scarring and uterine fibroids. They may
CC also be useful in wound healing and in contraception. The present
CC sequence represents a nucleic acid sequence of the invention.

; Sequence 1, Application US/08486756A
Patent No. 5981711
; GENERAL INFORMATION:
APPLICANT: Zavada, Jan
APPLICANT: Pastorekova, Silvia
APPLICANT: Pastorek, Jaromir
TITLE OF INVENTION: MN Gene and Pr
ADDRESSEE: Leona L. Lauder
STREET: 6 Mariposa Court
CITY: Tiburon
STATE: California
COUNTRY: USA
ZIP: 94920
COMPUTER READABLE FORM:
MEDIUM TYPE: Ploppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/486,756A
FILING DATE: 07-UN-1995
CLASSIFICATION DATA:
APPLICATION DATA:
APPLICATION BR: US 08/260,190
FILING DATE: 15-UN-1994

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    0
Sequence 726, Application US/09954456
Patent No. US20020115057A1

GENERAL INFORMATION:
APPLICANT: Young, Paul
TITLE OF INVENTION: Process for Identifying
FILE OF INVENTION: Sets
FILE REFERENCE: 68229-76

CURRENT APPLICATION NUMBER: US/09/954,456

CURRENT FILING DATE: 2001-09-18
PRIOR APPLICATION NUMBER: US/60/233,617
PRIOR FILING DATE: 2000-09-18
